

Psychologists' Suicide Risk Assessment Practices and Experiences in Canada

I am inviting you to participate in a University of Alberta survey about your practices and experiences **conducting suicide risk assessments** for my Ph.D. dissertation research project.

This study is open to individuals who are:

- (a) registered/licensed psychologists currently practicing in Canada AND
- (b) have completed suicide risk assessments with clients/patients in the last 10 years.

This anonymous survey is expected to take **20-30 minutes** to complete.

Survey link: bit.ly/UofASRASurvey

If you know other psychologists in Canada who would be interested in this study, please share with them the survey link.

This survey is part of a mixed method study. At the end of the survey, you may indicate your interest in participating in a brief follow-up phone interview, which will occur after the survey data is collected and analyzed. Not all participants will be contacted for a follow-up interview.

This study has been approved by the University of Alberta Research Ethics Board 2 (Pro00105480).

I appreciate your consideration and hope this message finds you well!
